

Multichannel image detectors, volume 2 - based on a symposium

American Chemical Society - Characteristics of a multichannel low

Description: -

- Image processing -- Equipment and supplies -- Congresses.
- Spectrum analysis -- Instruments -- Congresses.
- Spectrum analysis -- Congresses. Multichannel image detectors, volume 2 - based on a symposium

- Colour young Puffin
- ACS symposium series -- 236 Multichannel image detectors, volume 2 - based on a symposium

Notes: Includes bibliographies and indexes.
This edition was published in 1983

Characteristics of a multichannel low

Malioutov, Mütjat Çetin, and Alan S. Kostyukevych, Dimitriy Kozin, Leonid P. A pair of 511 keV photons results from the annihilation of a positron and an electron.

Mujdat Cetin's Publications

Sensitivity in terms of intensity can be adjusted by changing the integration time, but the integration time for all diodes in array detector is the same for any given scan, and all portions of a spectrum are acquired within the same limited dynamic range. The ultra-high-resolution, pixel-matched, parallel-hole collimators consisted of six layers, with the same between the hole and pixel size. Jie to provide the experimental environments on energy spectrum testing, and Dr.

ACS Symposium Series (ACS Publications)

To detect the 511 keV gamma rays for PET applications, a large input range of the front-end electronics should be considered.

Design of high

This study shows that a larger good field region is possible in the 16-segment rectangular design as compared to the Halbach and bullet-nosed designs, making it more attractive for high-intensity proton linacs. Results showed that both readout circuits exhibited sensitivity to the back voltage.

Techniques For Time Resolved Spectroscopy With Image Detectors

Section 3 gives electrical testing results.
