### Preservation Brief 22: The Preservation and Repair of Historic

#### Stucco

To obtain a neat repair, the area to be patched should be squared-off with a butt joint, using a cold chisel, a hatchet, a diamond blade saw, or a masonry bit.

#### Moisture Remediation in Single Wythe Masonry

The masonry must be pre-wet before applying an alkaline cleaning agent, but not when using a solvent. Air entraining agents, for example, help the mortar to resist freeze-thaw damage in northern climates.

#### MasonCare 300 > KING Masonry Products

Locate as much information as possible about recommended care and cleaning products and applications before making a selection.

#### Preservation Brief 22: The Preservation and Repair of Historic Stucco

Water-repellent coatings are frequently applied to historic masonry buildings for the wrong reason. Includes major revision of the section.

#### The Heritage Directory

As such, this document was diligently drafted by experienced professionals and therefore must not be copied integrally; rather you must adapt or

Filesize: 14.107 MB

even modify it according to your project, which our technical representatives and engineering service representatives would be more than happy to help you with. Therefore, the owner must carefully plan the work to avoid problems.

### **Historic Plaster Conservation Services**

No longer used just as a coating for a substantial material like masonry or log, stucco could now be applied over wood or metal lath attached to a light wood frame. The actual specification of a particular mortar type should take into consideration all of the factors affecting the life of the building including: current site conditions, present condition of the masonry, function of the new mortar, degree of weather exposure, and skill of the mason. Ingestion Never give anything by mouth if person is rapidly losing consciousness, or is unconscious or convulsing.

### **UFGS Changes and Revisions**

Thoroughly saturated masonries may take several months to dry.
