## Experimental study on flexural performance of reinforced concrete beams subjected to different plate strengthening

The main focus of this chapter is the flexural properties of various TRPCs.

## Mechanical properties of natural fibre reinforced polyester composites: Jowar, sisal and bamboo

The flexural stiffness and flexural strength of the composites with a 30% fiber weight fraction are 2. As a result, issues such as the cracking of concrete, the over deflection of girders, and accompanied disease of bridges need to be controlled and dissolved.

## Flexural behavior of textile

Polarity parameters and dynamic mechanical behaviour of chemically modified banana fiber reinforced polyester composites. U-hoop end anchorage does not show significant influence on structural performance of CC- specimens.

## Flexural behavior of textile

HCP is a thin plate of Strain Hardening Cementitious Composite SHCC reinforced with Carbon Fiber Reinforced Polymer CFRP laminates.

## Flexural properties of typha natural fiber

Especially, 3D TRPCs exhibit advanced properties by overcoming some limitations such as delamination and debonding that occur in conventional 2D laminated composites under flexural loading. However, it is necessary to rule out the effect from above factors in one study.

## [PDF] Fibre Reinforced Polyester Composites

De-velopment of bamboo-based polymer composites and their mechanical properties. The focus has been on flexural capacity, stiffness, cracking

development, interface bonding, debonding failure, etc.
