

# Greenhouse effect - living in a warmer Australia

New South Wales University Press - Climate change and biodiversity

Description: -

- Rites and ceremonies -- Spain -- History -- 17th century.  
 Exorcism -- Spain -- History -- 17th century.  
 Catholic Church -- Customs and practices.  
 Climatic changes -- Australia.  
 Greenhouse effect, Atmospheric -- Australia.  
 greenhouse effect - living in a warmer Australia  
 -greenhouse effect - living in a warmer Australia  
 Notes: Includes bibliographical references (p. [197]-198) and index.  
 This edition was published in 1989

Filesize: 5.52 MB

## Global Warming

Changes in rainfall patterns can damage land, plants and animals.

## Observed changes in our climate system

The shift in seasons may already be causing the lifecycles of pollinators, like bees, to be out of sync with flowering plants and trees. How Much More Will Earth Warm? In many cases, however, such migration might not be possible because of unfavourable environmental parameters, geographical or human-made barriers and competition from species already in an area. In Australia, action plans have been prepared for a number of endangered species that try to address the possible impacts of global warming.

## Global Warming

The largest rate of rise in sea level around Australia is to the north and west of the continent and at the New South Wales coast Figure 3. Use these resources in your classroom to help your students understand and take action on climate change.

## What is global warming

As the continents broke apart and moved, their positions on Earth changed, and so did the movements of ocean currents.

## Consequences and Effects of Global Warming

In the 1600s, Isaac Newton developed mathematical equations to model the motion of the planets —one of the greatest scientific achievements.

## Causes of Global Warming

Models predict that Earth will warm between 2 and 6 degrees Celsius in the next century. A greenhouse captures heat from the Sun during the day.
