### Mathematical optimization

For approximations of the 2nd derivatives collected in the Hessian matrix , the number of function evaluations is in the order of  $N^2$ .

### Lecture Notes

The Method of Feasible Directions. Book is in Used-Good condition.

### Mathematical programming

We also return to the traveling salesman problem and investigate the computational challenge of that problem

### Lecture Notes

It aims to provide students with an understanding, regardless of their major, to feel justifiably confident of their ability to write small programs that allow them to accomplish useful goals. This is one of over 2,400 courses on OCW. As a modelling language, LINGO is particularly useful for its ability to efficiently express problems with repetitive constraints.
