Affordable housing proposed on Quentin Road in Palatine

Methods Lab Publications The Methods Lab was an action-learning collaboration between the Overseas Development Institute ODI , BetterEvaluation BE and the Australian Department of Foreign Affairs and Trade DFAT conducted during 2012-2015.

Evaluation: What is it and why do it?

Considering sustainability in evaluation has usually meant different things to different people. Climate change is the greatest known threat to sustainable development, and its impacts go far beyond natural disasters Stern.

A CSIRO

To make this transition, evaluations can be done against well-articulated goals, such as the SDGs. By pointing out crucial but neglected areas and providing timely information to change development thinking and guide policy decisions, evaluations can push policy interventions from a generally accepted but perhaps ineffective state of inertia to a more beneficial course. EE impact evaluations may focus on the educational, environmental quality, or human health impacts of EE programs.

Evaluation: What is it and why do it?

Some evaluations have faced the criticism that they do not deal with unintended effects and complexities. In development economics, various empirical methods, including econometric analysis, measure the effectiveness of interventions. A third approach, which is the focus of this book, is to think of the impact of a project or other forms of intervention on sustainable development see IEU for examples.

A CSIRO

Often bureaucratic motivations have kept work in separate disciplines.

Evaluation Detail

New York: United Nations Evaluation Group UNEG. A total 20 units in the proposed Palatine building -- more than one-third of the total -- will be reserved for tenants with incomes of more than 80% of the area median income, Dumke said.

Evaluation, Economics, and Sustainable Development

Often, evaluation is thought to be constrained by the lack of adequate data and information. It should continue to be revised over the course of the evaluation should either the intervention itself or the understanding of how it works — or is intended to work — change. It describes features of an organizational culture, and explains how to build teamwork, administrative support and leadership for evaluation.

A CSIRO

Redford, 2001 Biodiversity Support Program. By considering the development process in designing an evaluation, findings can have value not only retrospectively but also in real time and prospectively.
