## Museum Peenemünde

On April 23, 1932, the Army visited the Raketenflugplatz again and gave Nebel a small contract for 1,367 marks if he could build a rocket that would successfully reach 3,000 meters in altitude while ejecting a red flare to be tracked with Army instruments. This influential film introduced to the screen many of the elements familiar to space enthusiasts, such as the stage rocket, and the effects of acceleration and weightlessness.

## Peenemünde Army Research Center: an Abandoned Military Installation in Peenemünde, Mecklenburg

In 1927 this group of enthusiasts actually set a goal to build the types of rockets described in Oberth's book.

## Ausstellungen

Around 1930 Valier started experimenting with liquid-fuel rocket engines.

## public-docs.talentcoach.ir

Hermann Oberth, a medical student in Munich, published a book in 1923 entitled Die Rakete zu den Planetenräumen The Rocket Into Interplanetary Space. In a 1948 interview there, a German journalist managed to extract von Braun's understanding of why V-2 production was delayed until it was too late to make a difference in the war. However, he also stirred the innermost prejudices and hatred within the German society.

## Ausstellungen

He attempted to prove, by using scientific and mathematical evidence, that launching rockets into space was practical. The dining table was full of revelers.
